

BIOPTRON BEAUTY THERAPY

(Transcript of article in Evening Gazette, Teesside, 27 January 2006)

A new dimension in Skin Care technology has arrived.

The Loren.St.Klair (LK) Salon in Middlesbrough is the first salon in the North East to install and use the revolutionary medically approved BIOPTRON Polarised Light Therapy System.

Lisa Bednarek, the resident beautician at LK has had the BIOPTRON lamp on trial with some amazing results. We initially purchased the BIOPTRON System for advanced facial treatments. It rapidly improves micro-circulation and cell oxygenation whilst enhancing fibrocyte stimulation and the production of new collagen fibre in skin tissue which will restore skin tightness and elasticity. The skin feels smoother and takes on a healthier appearance even from the first treatments. Scarring is less evident and fine lines and wrinkles begin to disappear. Its like a non-surgical, completely natural face lift.

Not surprisingly, due to the bio-stimulative and regenerative properties of its wavelength, the BIOPTRON light goes much further than cosmetic and beauty applications. We have been treating clients with all kinds of skin problems such as ; ACNE ROSACEA, ECZEMA, PSORIASIS, BRUISES, SPOTTY COMPLEXIONS, and many more with amazing results. Our Beautician and clients report that apart from the actual physical therapeutic results, the “feel good” factor you get from just 10 minutes under the light is astonishing. You feel relaxed, stress-free and full of life.

The owners of LK, Brian and Olga, are convinced that BIOPTRON Therapy is a must-have addition to everyone’s overall well-being and beauty regime. It truly is a valuable breakthrough in natural beauty therapy.

The BIOPTRON light therapy system is used in progressive clinics and health-care facilities throughout the world for various medical indications including : *Pain control and mobility enhancement in Rheumatology / Arthritis, Wound Healing and Burns, Physical Therapy and Rehabilitation, and for certain applications in the area of Sports Medicine.*

BIOPTRON light treatment is completely non-invasive and is without any harmful side-effects and absolute contra-indications. It is appropriate for use on all skin types, even in the case of tender and exceedingly sensitive skin. Treatment times are short – 10-15 minutes per therapy session. The BIOPTRON light spectrum does not include any harmful ultraviolet rays and is classified as “cold” low energy Polarised Incoherent light. The device is patented worldwide and is approved as a medical device under European Union Guidelines. It is also registered with the FDA (USA), the TGA (Australia) and many other countries worldwide as a listed medical device.

Treat yourself to a relaxing and pleasurable session of BIOPTRON light therapy, or register for one of our specialised therapeutic/beauty treatment schedules with this advanced new technology. You’ll look and feel like you’ve just been on holiday !
